

Exclusive Rental of a PVC Film – Welding - Machine „for Customers only“

Customers, who purchase film material at GSSAG, are offered a PVC film welding machine for rent. The rate is SFr. 100.- per working day.

This welding machine allows clean and perfectly sealed welding of foil cross sections made from PVC. The machine is very user friendly, simple, and efficient. It welds up to 2 Meter of film per minute.

Where is the machine best used;

- In large tank rooms with distances between the tank and the wall is 50 cm.
- In tanks that can be lifted at least 40 cm (welding underneath the tank)
- In tanks in general where the pre-confectioned material is becoming too heavy and circumstances do not allow a proper installation.

What are the requirements;

- Persons who intend to use this machine must be instructed by a professional.
- The machine requires a 380 Volt power source.
- Reservations have to be made as soon as possible.
- The machine has to be returned as quickly as possible once the work is finished.

What are the advantages;

- Roll material can be purchased without the payment of preconfections.
- The assembly is much simpler and more efficient for the applicator.
- If the floor underneath the tank can be welded, there are no heavy weights.
- Welding is done at a speed of 2 Meter per minute. This pace is impossible when working by hand.
- The machine does the welding, all the applicator has to do it control it. Exhaustion is no longer an issue.

For an individual consultation or in case of an emergency, please call us.
